SUPPORT YOUR IMAGINATION

About Selens

Selens was founded in 2011 and has been in the industry of photography lighting equipment and related accessories for 12 years. Selens is committed to provide excellent solutions to behind-the-scenes workers in the field of photography and film making. We attach great importance to user experience and listen carefully to needs and desires, which inspires us to create better products that help users to complete their jobs more easily and efficiently.

Selens' products focus on user-friendly, simple and convenient concepts, allowing users to focus on creation and allowing imagination to be freely released without the constraints of technical problems.

Selens products are engineered to provide incredible strength and durability in the toughest environments and are recognized by industry professionals.

Collapsible Reflectors

As a little expert in filling light, the reflector is one of the essential props for photography. It mainly comes in three shapes: round, oval and square. Reflectors mainly come in five colors: gold, black, silver, and soft light. Different colors have different light effects.

No Reflector	White Reflector	Silver Reflector

Without a reflector, the shadows are too dark, the light-receiving surface is overexposed, and details are easily lost.

The reflective performance is not very strong, and the effect looks soft and natural, which can make the details of the shadow areas richer.
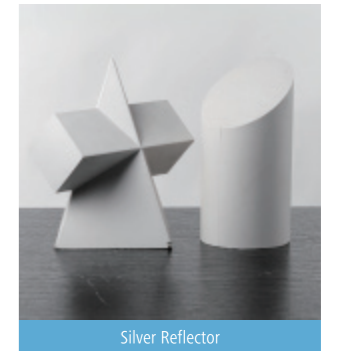

It has strong reflective ability and can reflect brighter light, and can be used as a contour light or eye light. Use more on cloudy days

Diffuser	Black Reflector	Gold Reflector

It plays the role of blocking and weakening the light between the light source and the subject or person, making the light soft and reducing the contrast.
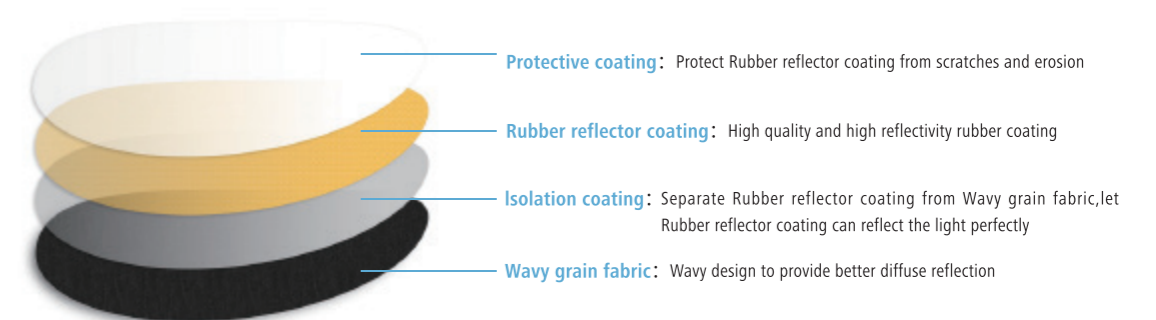

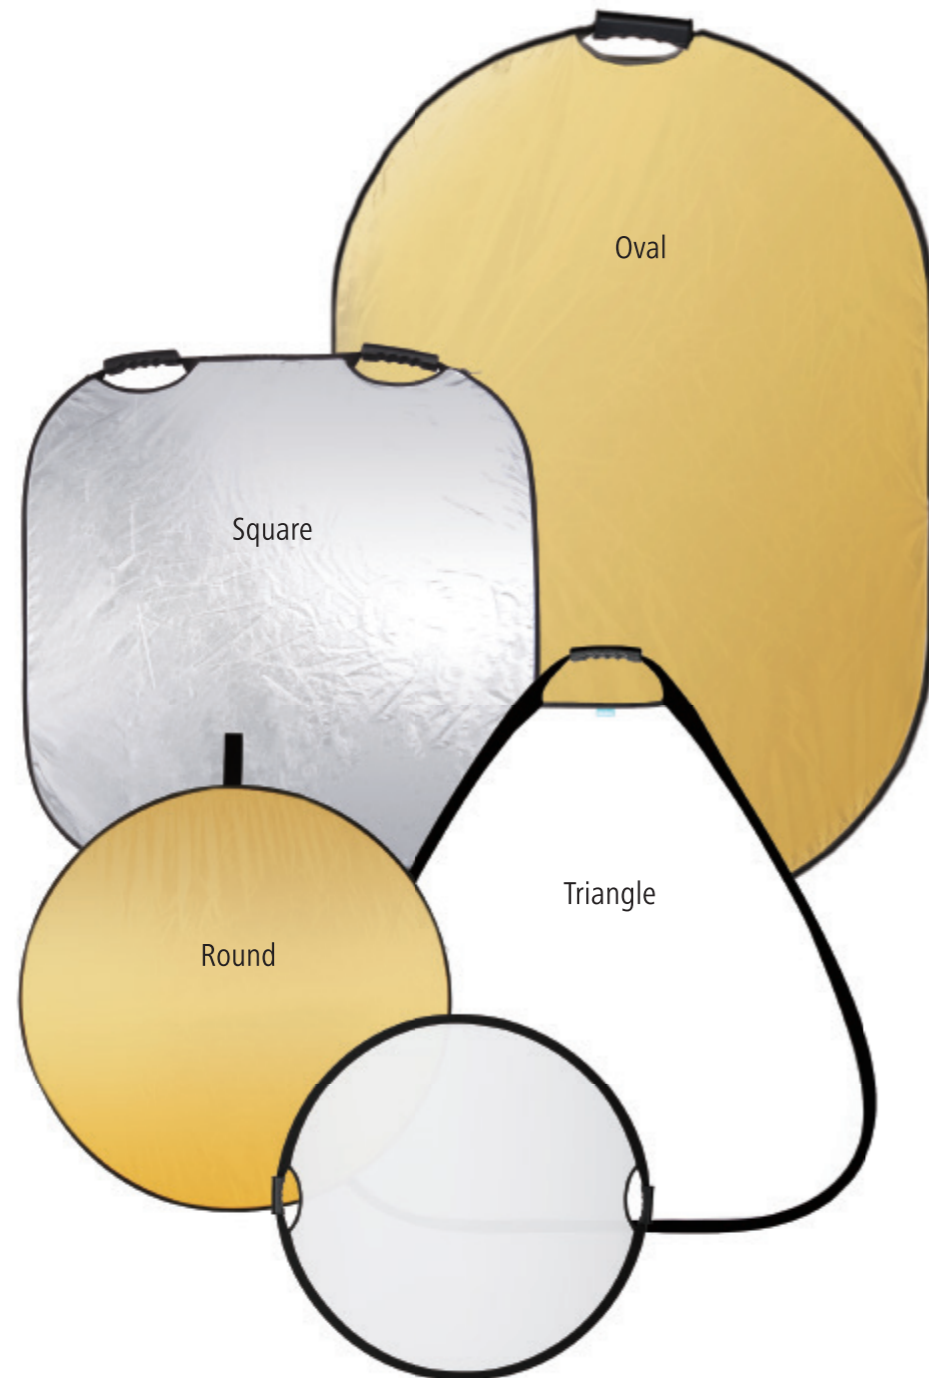

Black Reflector use light reduction methods to reduce the amount of light. Placing them near models or subjects can reduce the amount of light and increase the three-dimensional effect.
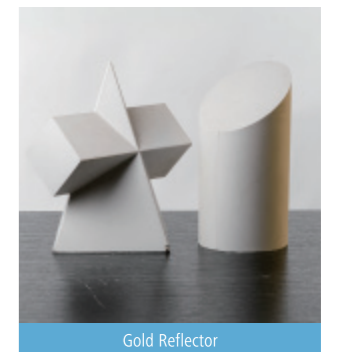

The golden reflector can change the color temperature to become a warm light source, which can be used as the main light or "ambient light"

Multi coating protected

Protective coating：Protect Rubber reflector coating from scratches and erosion

Rubber reflector coating：High quality and high reflectivity rubber coating

Isolation coating：Separate Rubber reflector coating from Wavy grain fabric,let Rubber reflector coating can reflect the light perfectly

Wavy grain fabric：Wavy design to provide better diffuse reflection

Collapsible Reflectors
