Cuckoo Clock — Quick Setup & Reset Guide

Use this guide if your clock **does not chime on the hour**, or the **number of chimes does not match the time.**

Check all parts are connected first:

P1 Control Module*1

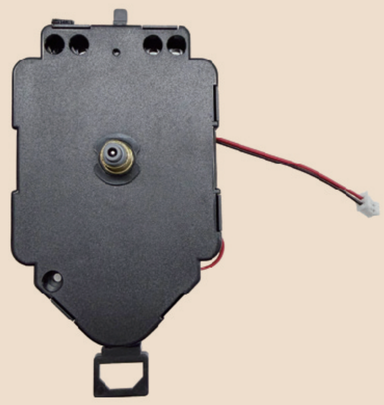

P2 Battery Box*1

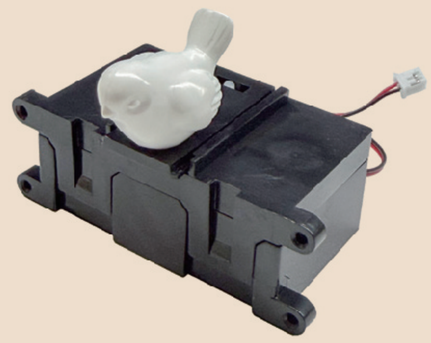

P3 Light Sensor LED*1

P4 Clock Movement*1

P5 Cuckoo Module*1

Part 1 - Reset the chime timing

1 Fit the two batteries into the RIGHT compartment only — leave the LEFT empty. Remove all clock hands.

2 Set the mode switch to ON.

3 Install the minute hand.

4 Slowly turn the minute hand clockwise until you hear a **click** and the cuckoo starts to chime. Stop immediately, then pull the hand straight off without turning it any further.

5 Reinstall the minute hand at 12 o'clock.

! √Align to 12, then push on.
× Push on, then twist to 12.

6 Verify: turn the minute hand one full turn to the 12 o'clock position — it should chime on the hour. If not, repeat steps 3–5. (The chime count does not matter yet.)

7 After testing, pull the minute hand straight off at the 12 o'clock mark.

8 Take out the batteries.

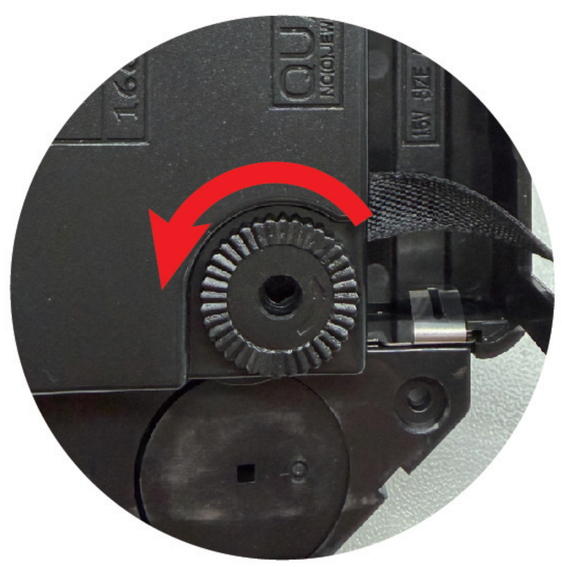

Part 2 - Set the current time

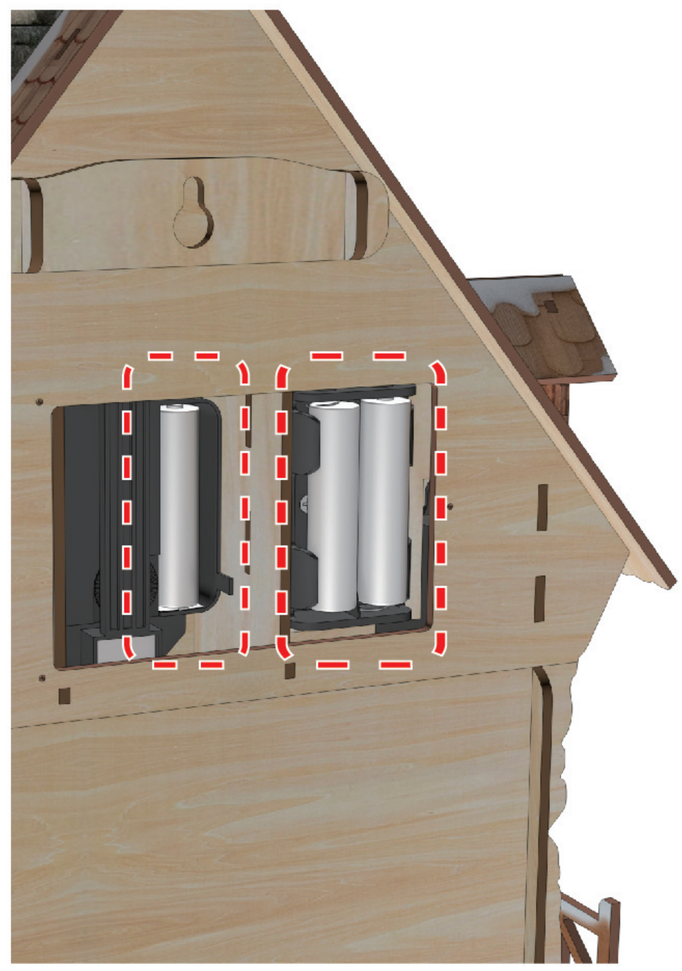

9 Install all three hands vertically at 12. Do not turn them during installation.

10 Turn the knob in the arrow direction to set the hands to the current time.

11 Fit all three batteries (left and right).

Part 3 - Set the chime count

After the prelude, one loud "Cuckoo" and one soft "Cuckoo" together count as one chime.

12 Set the mode switch to ON.

13 **Set the count**
Default: 5 chimes.

- Press DEMO to preview the current chime count.
- Each press of SET adds 1.Count cycles 1→12
- At every new hour, the count automatically +1.

Example: it is 10:30.
To make the clock chime **11 times at 11:00**, press **SET** **5 times** so DEMO shows **10**.
(10 + 1 = 11 at the next hour)

Mode switch	Behaviour
ON	Chimes every hour, 24 hours a day
CDS	Chimes only in daylight (light-sensor mode)
OFF	No chime

To reset the chime count, remove and reinstall the two batteries in the right battery compartment, then repeat Steps 12–13.
