4. Ironing the eyelash: to be wet of the eyelash, put them on the paper. straighten out them and curl them onto the pipe. put them under the sunshine or into the oven. When they are dried, take them out.

# Production Process

put them into the oven to be drying : (heat-resistant)      natural drying

5. Disconnecting the tubes, put the eyelash on the desk when they are drying.

6.cut them off to be seperated, applying glue on the paper.

7.put the eyelash sticking to the topkapi in the end

# Quality Testing

## 一、eyelash in pair

to be symmetry by the eyelash in pair

the length and the style to completely must be in accordance with customer requirements

the root number of eyelash can't lack,Density distribution is uniform to be neatly before put the eyelash in to the box,pick up the unflatness ones.

if have lengthen one in the end and middle of eyelash,be sure the distribution.

Before puting the eyelash into the nox,don't put more glue on the eyelash,apply gule to the uniform.

After puting the eyelash into the box,To ensure that the eyelash stick completely attached to the packing mode.

To be sure the eyelash boxes is natural appearance, neatly,delicate.

## 二, salon eyelash

to be sure if the curl is right for the production.

to be sure if the length is right for the production.

to be sure if the thickness is right for the production.

to be neat and orderly before put the eyelash into the box.
